

4TQWebgen

Global, Portable Distribution

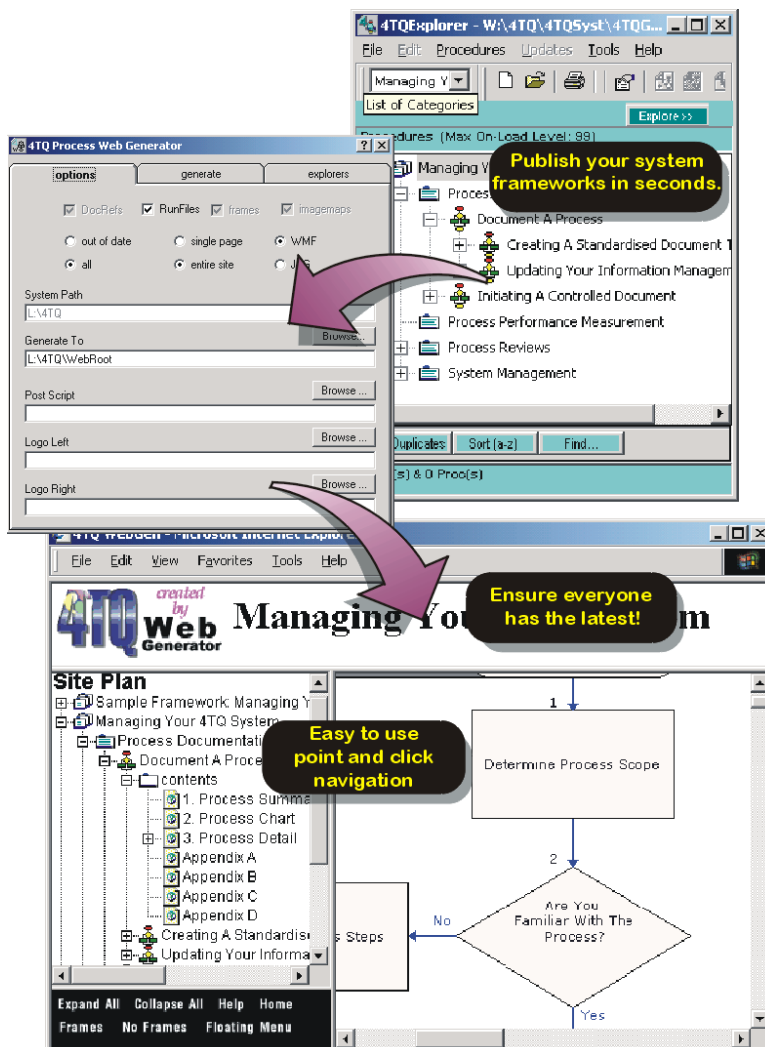

4TQWebGen is the fastest, most efficient way to convert your **4TQToolKit** process information directly into a fully linked HTML Web site. Using your company's existing Intranet or LAN / WAN file system, procedures can be updated and distributed throughout your organization efficiently and inexpensively. Up to the minute distribution of your process information has never been easier!

Utilizing standard Web Browsers to view your process information makes additional expensive user training unnecessary.

4TQWebGen rapidly builds and maintains your entire process management Website, including all the hypertext linkages between the process layers.

4TQWebGen creates the ideal cost effective method of delivering your procedural Information to your entire organization including remote sites, branch offices and mobile field staff.

Features

- **Efficient** & extremely cost effective.
- **Safe** read only distribution of procedures.
- **Utilizes** standard "out of the box" Web Browsers.
- **Easy** to use application, just select the required options and click!
